

Home Sweet Home

Birmingham, Ala.-based Morris-Shea performs works across the United States and the Caribbean, but it sure is nice to work in “Sweet Home Alabama.”

A family-run firm of 49 years, Morris-Shea Bridge Co. started out as a road and bridge construction firm, later finding its niche as a deep foundations specialty contractor. From drilled foundations including DeWaal displacement piles, CIDH Piles, drilled shafts, continuous flight auger (CFA) piling and auger cast-in-place piling to various types of driven piles, a range of techniques will provide opportunity for design improvements. Morris-Shea has the capacity to undertake deep foundation contracts and deliver as designed or find alternatives to reduce the foundation’s budget, streamline the schedule and value engineer to the project’s advantage. ♦

1-m-dia CFA piles are installed on a project in Montgomery, Ala.
